

Kevin Pek Yue Ting

Singapore Citizen | kevinpekyt@gmail.com | github.com/kevin-pek | kevinpek.com

WORK EXPERIENCE

Meta – Software Engineer | *Singapore* 2025 – Now

- Used AI native workflows to ideate, develop and ship a new consumer third-party app.
- Delivered mobile (Facebook & Instagram), web, and backend features for a zero-to-one project.
- Partnered with product designer and content designer to implement designs for product features and i18n.

GymLah – Founding Engineer | *Singapore* 2024 – 2025

- Part of Open Government Products' Build for Good Accelerator 2024, received \$20,000 in funding.
- Developed a booking platform for partnering senior gyms. Conducted user testing and iterated on feedback.
- Handled full-stack development (Python, TypeScript, React) with Docker deployment.

INTERNSHIPS

GovTech – Data Science Intern | *Singapore* 2024

- Created a custom PyTorch module to implement [few-shot learning technique](#) for CLIP models.
- Finetuned OCR and Transformer models for document processing API, improving classification accuracy.

NUS IORA – Full Stack Developer Intern | *Singapore* 2022 – 2023

- Designed and developed a quiz platform with dashboards and user management features in React, Typescript.
- Implemented bandit algorithms (epsilon greedy, zpdes) for question recommendation problem.
- Deployed applications on AWS and on-premise servers using Docker.

Idemia – Backend Engineer Intern | *Singapore* 2022

- Developed applications in Java using Spring Boot, and orchestrator application using Apache Camel.

DSTA – AI Engineer Intern | *Singapore* 2021

- Built drone flight simulation environment for training reinforcement learning models using Unity (C#).
- Trained reinforcement learning agents and combined with pathfinding algorithms for target seeking AI.

EDUCATION & AWARDS

National University of Singapore, B.Sc Data Science, 2nd Major Computer Science 2021 – 2024

- GPA: 4.45/5 (Second uppers). Awarded Dean's List for AY2022/23 Semester 1.

Stanford University, International Honors Program 2023

- Awarded the SG-US Summer Exchange Scholarship.

PROJECTS

Bitnet.c

- Implemented training and inference on neural networks with 1-bit weights based on the [BitNet paper](#); tested on MNIST dataset. [Github repo](#).

PDFSearch

- Open source Raycast extension to search contents of multiple PDF documents at once. [Github repo](#).

Pix2Latex

- Python menubar app to run both MacOS OCR engine and pretrained OCR models on screen. [Github repo](#).

AcademIQ

- Web-app that uses LLMs to extract topics from uploaded documents and uses RAG to generate relevant questions on user-selected topics. [Github repo](#).

SKILLS

- | | |
|-------------------------------|---|
| • Languages: | Python, Typescript, Javascript, Hack, C, Golang, C#, Java |
| • Web Development: | FastAPI, React, NextJS, Express, NodeJS |
| • Cloud/Tools: | GCP, AWS, Docker, Git |
| • Machine Learning/AI: | PyTorch, Transformers |
